NV55 Series High Flow Diaphragm Valves

Parker Hannifin Corporation’s Veriflo Division presents the NV55. The NV55 is an economical, general purpose, high flow diaphragm valve ideally suited for use when flowing large volumes of corrosive and non-corrosive fluids. Standard construction includes 316L Stainless Steel body, various seat materials, and an Elgiloy® diaphragm with an outboard metal-to-metal seal for leak integrity.

Features

- ▶ High Cycle Life
- ▶ Compact Size
- ▶ Positive, consistent shutoff
- ▶ Metal-to-metal seal to atmosphere
- ▶ O₂ cleaned
- ▶ Ideal for high flow applications
- ▶ Fully functional from vacuum to 125 psig for AOP valves and 250 psig for manual valves
- ▶ The closed position does not vary with the life of the product

Specifications

Materials of Construction

Wetted

Body 316L Stainless Steel
 Seat PCTFE, optional PEEK™, Vespel®
 Diaphragm Elgiloy® or equivalent

Non-wetted

Nut 316L Stainless Steel
 Cap 316L Stainless Steel

Actuation Devices

AOP Aluminum
 Indicator knob (Black) Aluminum
 Levers (Blue) Aluminum, Powder Coated
 Handwheel (Blue) ABS Plastic

Operating Conditions

Maximum operating pressure:

AOP 125 psig (8.6 barg)
 Manual 250 psig (17.2 barg)
 Minimum operating pressure Vacuum
 Actuator pressure 70-125 psig (4.8-8.6 barg)

Temperature -15°F to 150°F (-26°C to 66°C)
 Bake out in the open position 250°F (121°C)

Design Proof Pressure 375 psig (26 barg)
 Design Burst Pressure 750 psig (52 barg)

Functional Performance

Flow capacity:

AOP, Indicator Knob, Handwheel C_v = .55
 Lever Versions C_v = .48
 (SEMI Flow Coefficient Test# F-32-0998)

Maximum Inboard Design

Leak Rate Bubble Tight

Standard Connections

1/4" Compression, Male NPT, Female NPT
 3/8" Compression, Male NPT, Female NPT
 1/2" Compression, Male NPT, Female NPT

Internal Volume

3.29cc

Approximate Weight

0.81 lbs (0.36 kgm)

Compression Ends include Nuts and Ferrules.

Nova Series Diaphragm Valves

Parker Hannifin Corporation's Veriflo Division presents the NOVA. The NOVA is an economical, general purpose diaphragm valve for regulator outlet valve, gas control panels, & analyzer sampling system applications. Standard construction includes 316L Stainless Steel or Brass body, various seat materials, and an Elgiloy® diaphragm with an outboard metal-to-metal seal for leak integrity.

Features

- ▶ High Cycle Life
- ▶ Compact Size
- ▶ Positive, consistent shutoff
- ▶ Metal-to-metal seal to atmosphere
- ▶ O₂ cleaned
- ▶ Low internal volume
- ▶ The closed position does not vary with the life of the product

NOVAAOP Series Air Actuated Diaphragm Valves

Parker Hannifin Corporation’s Veriflo Division presents the NOVAAOP. The NOVAAOP is an economical, general purpose diaphragm valve for gas control panels & analyzer sampling system applications. Standard construction includes 316L Stainless Steel or Brass body, various seat materials, and an Elgiloy® diaphragm with an outboard metal-to-metal seal for leak integrity.

The NOVAAOP Series diaphragm valve is a derivative of the NOVA manually operated valve and Veriflo’s time-proven air actuated valves. The AOP is available in normally open (NO) or normally closed (NC) configurations. A choice of two line pressures are available, 250 psig and 500 psig.

Features

- ▶ High Cycle Life
- ▶ Compact Size
- ▶ Positive, consistent shutoff
- ▶ Metal-to-metal seal to atmosphere
- ▶ O₂ cleaned
- ▶ Low internal volume
- ▶ Low actuation pressure

QUANTUM 944AOPHP Air Operated High Pressure Diaphragm Valve

The 944AOPHP is an exceptionally clean, air-actuated valve engineered to provide reliable, accurate performance from vacuum to 3,500 psig. The air actuator is a dual-piston design, which is spring-loaded to the “normally closed” position. The unique feature is that the opening function incorporates the use of hydraulics.

Features

- ▶ Pressures up to 3500 psig.
- ▶ Internally threadless and springless.
- ▶ A unique patented compression member that holds the seat can be replaced without special tools, allowing ease of full field serviceability.

QUANTUM 928AOP Series Pressure Reducing Air Operated Valve

The Quantum 928AOP is a poppet-style diaphragm valve for remote control of low pressure gases or liquids. The 928AOP serves two functions: it acts as the system inlet valve, and it reduces the system pressure to a safer working range.

Features

- ▶ Improves system safety by lowering or regulating system pressure to 350 psig.
- ▶ Fully functional from a vacuum to 3500 psig inlet and outlet.
- ▶ Aerodynamic, smooth flow passages.
- ▶ Minimum particle generation and entrapment.
- ▶ 100% Helium leak tested.
- ▶ A unique patented compression member which loads the seal uniformly without the need for threaded components or crimping operations.

QUANTUM FS190 Excess Flow Shut-Off Valve

Parker Hannifin Corporation’s Veriflo Division presents the FS190. The FS190 is a non-attitude sensitive, excess flow shut-off valve designed to operate with a wide range of inlet pressures.

The capability of operating from 10 to 3500 psig allows it to be used either between a high pressure source at the inlet to the pressure regulator or in the low pressure delivery line to a process. In both applications, this control valve will automatically shut off the delivery of gas if the flow exceeds a preset limit.

The functional components of the FS190 are incorporated within the body style of a 1-1/4 inch Quantum valve. An actuating knob has been designed to manually reset the valve and clearly indicate the relative operating position — either “Open (Reset)” or “Auto (Shut Off).” A pneumatic actuator is available, which will allow resetting of the valve from a remote source.

The FS190 is offered with six different pressure/flow limits: A,B,C,D,E, and F (see Sizing Chart). The operation of the valve is not affected by mounting orientation (non-attitude sensitive).
